[Beams Painting](#) recently performed repair work caused by water damage from a roof leak.

[Beams Painting](#) recently performed repair work caused by water damage from a roof leak. Brix Restaurant had this water damage from a roof leak in the dining area.

The roof leak damaged the dry wall which had to be re-taped and finished.

We used Zinser Coverstain® which is a primer, sealer, stain killer and bonding agent for interior and exterior application. We used a yellow mesh dry wall taper for the sheetrock seams. The yellow mesh allows one to know when enough mud has been applied to cover the area.

We then applied one coat of mud smoothly to minimize sanding.

once the last coat of mud has been applied we use shop vacs attachments to minimize the dust.

The finished dinina area ready for business and accepting custommers for Charlottesville's premier "Brick Fired Pizza"

[Beams Painting](#) is licensed & insured with over 25 years experience. We understand how important your business is to you and will employ old world quality with state of the art techniques to ensure you get the best look possible for your business. [Related Article](#)
